50M/2835 HVF voltage Led strips/

120pcs led/meter/AC230V/IP66/10mm

Silicone extrusion, environmental protection, anti-UV, anti-aging, anti-yellowing, safe and stable structure design
IC Design, No need rectifier, 230Vac LED strip, cascaded up to 50 meters

Lower watts at same brightness/energy saving
Good color consistency

LEDs 99.99% golden wire and copper support, super bright
LEDs, stable and reliable

IP grade: IP66

Power factor > 0.9

Application:

Decoration lighting, direct lighting or indirect lighting

Installation:

3M Adhesive & PC clips & Silicone clips & Channel/ABS & AL profile

Warranty:

3 years

Product Model	Color	CCT (K)	Ra	Beam angle (°)	Lumen (lm/m)	Efficiency (lm/W)	Voltage (V AC)	Current (mA/m)	Power (W/m)
SW-HVF2835W60-SE-230	WW	2700	≥80	120	1342	89.5	230	65	15

	outer box	50	100	100	11.6	L415*W415*H36

Package :

Schematic :

50M/2835 HVF voltage Led strips/

120pcs led/meter/AC230V/IP66/10mm

Installation Instructions:

Product and needed tools:

Led strip

Electric screw driver

Installation methods 1 :

Clean the installation surface

Fix the light strip to the surface of the object.
Use silicone clips and screws to fix

R angle of installation surface > 30mm.

Installation methods 2 :

Fix the PC clips and ensure that the distance between the installation clips is 250mm

PC clips installation, it is recommended to configure 4 clips per meter.

50M/2835 HVF voltage Led strips/

120pcs led/meter/AC230V/IP66/10mm

Installation methods 3:

Clean the installation surface.

Measure the length you need to install, cut off closest at "scissors" mark.

For the LED strips on the left, welded at the next scissors mark to connect to other connecting cables.

Peel off the 3M adhesive centrifugal paper on the back of the LED strips.

Paste the the LED strips where it needs to be installed.

Installation methods 4:

Measure the length you need to install and mark the position where the screws need to be fixed. We suggest to fix 3 screws for 1m channel

For soft wall installation, please use an electric screw driver to lock the card slot with screws, while for hard cement wall installation, please drill 6mm diameter expansion screw holes to lock.

U-shape Channel/ABS installation on the wall, as shown in the figure.

45° -Channel/ABS installation on the wall, as shown in the figure.

50M/2835 HVF voltage Led strips/

120pcs led/meter/AC230V/IP66/10mm

The 45° -Channel/ABS is suitable for oblique installation in the wall corner, as shown in the figure

Press the LED light strip into the channel, as shown in the figure.

Installation methods 5:

Measure the length you need to install and mark the position where the screws need to be fixed. We suggest to fix 3 screws for 1m aluminum profile

For soft wall installation, please use an electric screw driver to lock the aluminum profile with screws, while for hard cement wall installation, please drill 6mm diameter expansion screw holes to lock.

50M/2835 HVF voltage Led strips/

120pcs led/meter/AC230V/IP66/10mm

Make sure the LED strips is fitted in vertically.

Press the LED strips into the aluminum profile by the palm instead of the finger, otherwise it might damage inside electronic components due to the overpressure caused.

Make sure the angle between the LED strips and aluminum profile is not bigger than 15°, otherwise inside PCB might be damaged.

During installation and removal, when light length > 2m, make sure somebody helps to lift the light, in case the heavy weight of light lead to light be bended a small angle or be twisted, which may damage inside PCB.

Prepare a screwdriver, and insert the screwdriver through the bottom of light.

Move the screwdriver and unclench the light upwardly. Be careful the angle between the light and profile should not be bigger than 15.

Once the end of light is out, hold both sides of light by hand and pull it out along the profile slowly and orderly. Make sure the angle between the light and profile is not bigger than 15°, otherwise inside PCB might be damaged.

Connect the light strip to 230V AC voltage

Switch on and enjoy.

50M/2835 HVF voltage Led strips/

120pcs led/meter/AC230V/IP66/10mm

Instruction of soldering :

Cut off the light strip with scissors at the cutting position

Put wire through the plug

The wire shall be welded to the corresponding light bar pad in sequence.

Glue the plug and push the plug into the light strip
Wipe the spilled glue with cloth

Leave the light bar for a while, and wait for the glue to solidify

Instruction of soldering free:

Cut the light strip along the marking line as shown in the figure.

Push the silicone tube through the power cord as shown in the figure.

Connect the power cord L and N to the input end of the terminal.

50M/2835 HVF voltage Led strips/

120pcs led/meter/AC230V/IP66/10mm

First insert the light strip into the terminal interface, and then lock it tightly to the PCB pad with screws.

Fill the silicone tube with an appropriate amount of neutral silicone glue, then push the silicone tube to the end of the terminal and wipe the spilled glue with a white cloth.

Allow the light strip to stand for 2 hours until the adhesive has solidified before installation.

Caution :

No bending
at the point of LEDs

No contortion
of the led strip.

No bending
with Diameter < 6cm

50M/2835 HVF voltage Led strips/

120pcs led/meter/AC230V/IP66/10mm

Statements :

For safety, the product wire should be moved and replaced by the manufacturer, agent or other authorized person.

Please refer to the product manual before installation.

Above reference data is from our standard product. Please subject to your actual product data if there is difference.

Above reference schematic diagrams are from our standard product. Please subject to your actual product data if there is difference.

For safety, no touch the AC terminal.

Any acidic or alkaline substance is forbidden.

No notice for updated of this product.

Starwire reserve the final interpretation of the specification.
